BUSINESS REQUIREMENTS DOCUMENT · SYNC ESTATE

Sync Estate Hub v1

One login, one dataset, every module

Requirements for the build team to map the Hub: the shared foundation of login, roles, contacts, properties, notifications and the director dashboard that SynCRM, Sync Stay and Sync Finance all run on. Build it first, or alongside Sync Stay.

Prepared by LayerSync · 16 October 2026 · Internal · Draft for team review

01 Purpose

The Hub is the shared foundation every Sync Estate module runs on: one login, one set of users and roles, one list of contacts and properties, one notification centre and one director dashboard. It is not sold separately; it is included with every deployment.

Why it comes first: without it, Sync Stay and Sync Finance would each need their own users, contacts and properties, and data would have to be typed twice, which is exactly the problem Sync Estate claims to solve.

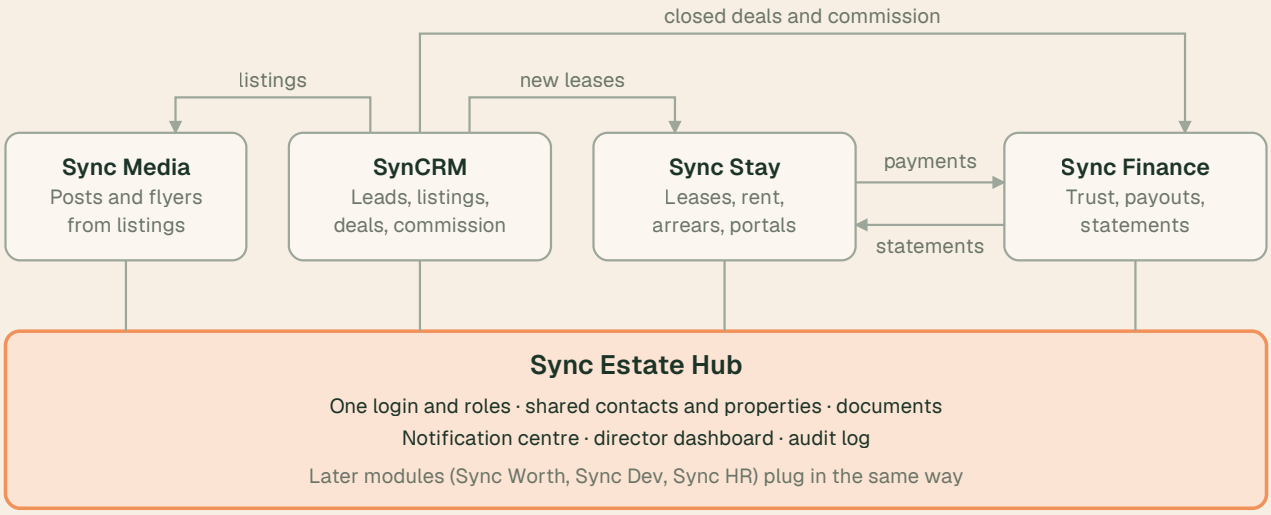

> **v1 is successful when** an agency admin can set up their firm, invite staff with the right roles, and move between SynCRM, Sync Stay and Sync Finance with one login, seeing the same landlord, tenant or property everywhere.

02 Scope

In v1	Not in v1
Agency (tenant) set-up, branches, logo and currency settings	Single sign-on with Google/Microsoft accounts
Login, password reset, invites, roles and permissions	Custom roles built by the agency (fixed role list in v1)
Module switcher, showing only modules the agency has paid for	Custom dashboards and drill-down BI
Shared contacts (landlords, tenants, buyers, sellers) and properties	Group / multi-company consolidation
Director dashboard with headline figures from each active module	Full white-label (custom domain, colours) – paid add-on
Notification centre	SMS and WhatsApp notifications
Document storage linked to any record	Public API for third parties
Audit log	Two-factor authentication (v1.1)
LayerSync super-admin: create agencies, switch modules on/off	Self-service sign-up and billing

03 How the modules connect

Every module shares one Hub, and data entered once flows between them

SYNC ESTATE ARCHITECTURE · FOUR MODULES ON ONE HUB

Each module keeps its own work but reads shared people and properties from the Hub, so a landlord, tenant or property is entered once. The arrows are the automatic hand-offs that remove retyping between sales, property management and finance.

04 Roles and permissions

v1 uses a fixed list of roles. A person can hold more than one role (common in small agencies, e.g. a principal who is also a property manager).

Role	Hub	SynCRM	Sync Stay	Sync Finance	Sync Media
Agency admin / director	Full, incl. users and settings	Full	Full	Full, approves payouts	Full
Sales manager	Own team	Team's leads and deals	None	Own team's commission	Use
Sales agent	Own profile	Own leads and deals	None	Own commission statement	Use
Property manager	Own profile	View contacts	Assigned properties	Record receipts; own landlords' statements	Use
Accounts	Own profile	View closed deals	View, record receipts	Full, prepares payouts	None
Marketing	Own profile	View listings	None	None	Full
Landlord (portal)	Portal only	None	Landlord portal: own properties, statements and payouts, read-only	None (its documents show in the portal)	None
Tenant (portal)	Portal only	None	Tenant portal: own lease, invoices, receipts and requests	None (its documents show in the portal)	None

Role	Hub	SynCRM	Sync Stay	Sync Finance	Sync Media
LayerSync super-admin	All agencies, support access	Support	Support	Support, read-only	Support

Rules: access is checked on the server for every request; the interface only hides what the server already blocks. LayerSync support access to an agency's data is logged in the audit log.

05 Functional requirements

"Must" items are required for v1 to launch. "Should" items go in v1 if time allows, otherwise v1.1.

ID	Area	Requirement	Priority
HB-01	**Agency set-up**	LayerSync super-admin creates an agency and switches modules on or off for it	**Must**
HB-02	**Agency set-up**	Agency settings: name, logo, address, contact details, VAT number, default currency (USD or ZiG), branches	**Must**
HB-10	**Access**	Email and password login, password reset by email, session timeout	**Must**
HB-11	**Access**	Admin invites staff by email and assigns one or more roles and a branch	**Must**
HB-12	**Access**	Admin deactivates a user; their records stay, their login stops immediately	**Must**
HB-13	**Access**	Landlord and tenant portal invites sent from Sync Stay, using the same login system	**Must**
HB-20	**Navigation**	One app with a module switcher; only active modules and permitted screens are shown	**Must**
HB-21	**Navigation**	Global search across contacts and properties	Should
HB-30	**Shared records**	One contact record per person or company, tagged with one or more types (landlord, tenant, buyer, seller, supplier)	**Must**
HB-31	**Shared records**	One property record used by SynCRM listings, Sync Stay and Sync Finance	**Must**
HB-32	**Shared records**	Each contact and property shows its activity across modules (deals, leases, payments) on one page	Should
HB-33	**Shared records**	Warn on likely duplicate contacts (same phone or email) when creating one	**Must**
HB-40	**Documents**	Upload files to any contact, property, lease, deal or transaction; view and download by permission	**Must**
HB-50	**Dashboard**	Director dashboard with headline figures from each active module (see below)	**Must**
HB-51	**Dashboard**	Role dashboards: each role lands on the page relevant to them	Should
HB-60	**Notifications**	Notification centre with unread count; modules post alerts to it	**Must**
HB-61	**Notifications**	Users choose which alerts also come by email	Should

ID	Area	Requirement	Priority
HB-70	Audit	Log of who did what and when for logins, permission changes, deletions and all financial actions	Must

Director dashboard figures (v1)

- **SynCRM:** new leads this month, deals in pipeline, deals closed
- **Sync Stay:** occupancy, rent due vs collected this month, total arrears, leases expiring in 60 days
- **Sync Finance:** money held in trust, agency income this month, payouts due, unpaid invoices

Only figures from active modules appear.

06 Non-functional requirements and acceptance

Non-functional

- **Multi-tenant:** every record belongs to one agency; no query can return another agency's data.
- **Security:** passwords hashed, HTTPS only, permissions enforced on the server, LayerSync support access logged.
- **Mobile-friendly and low bandwidth:** usable on a smartphone over a weak connection.
- **Backups:** daily, with per-agency restore.
- **Extensible:** adding a new module (Sync Worth, Sync Dev, Sync HR) must not require changes to the core login, roles or shared records.

v1 is accepted when

- [ ] LayerSync can create a new agency and switch on SynCRM, Sync Stay and Sync Finance in minutes
- [ ] The agency admin can invite staff, assign roles, and deactivate a user
- [ ] A user with one login moves between active modules without signing in again
- [ ] A landlord created in Sync Stay is the same contact in SynCRM and Sync Finance
- [ ] Each role sees only what the matrix in section 4 allows
- [ ] The director dashboard shows live figures from each active module
- [ ] Financial and permission changes appear in the audit log

07 Open questions for Andre and Tino

- [ ] SynCRM already has login, users, contacts and properties. Extend SynCRM into the Hub, or extract a new Hub service that SynCRM moves onto?
- [ ] How do existing SynCRM clients (Property Shop, Jawitz, Oasis) migrate onto the Hub without disruption?
- [ ] One app with modules, or separate apps sharing one login and database?
- [ ] Where does white-label (custom domain and colours) plug in later, so we don't block it now?
- [ ] Build estimate for the Hub alone, and whether it can run in parallel with Sync Stay
